

Care Management

Comagine Health has a long history of serving as a thought partner to and provider of care management services to state agencies in pursuit of a more equitable, accessible and outcomes-driven system while reducing costs to patients and burden on providers. Our customized services balance our clients' obligation to be responsible stewards of limited resources and providers' need for reduced administrative burden so they can deliver quality care as efficiently as possible.

Our patient-centered approach honors individuals' culture, social context and values — and empowers them to play an active role in making decisions about their own care. When health care is oriented around the unique needs of the patient, it can lead to higher patient satisfaction and better clinical outcomes.

Utilization Management

Utilization management means ensuring that every dollar spent on patient care is a dollar well spent. Comagine Health provides web-based utilization reviews and targeted review programs based on extensive data analysis. We focus on patient safety and cost containment, leveraging our deep experience with and knowledge of evidence-based protocols and best practices to deliver appropriate, optimized care.

With our guidance, clients allocate their limited health care resources wisely by avoiding overuse, misuse and underuse of health services. Our utilization management best practices ensure patients receive the right care, in the right setting, at the right time. At the same time, we maintain a high satisfaction record with providers.

Case Management

Case management helps people with catastrophic or complex chronic conditions receive the services and supports necessary to manage their health care needs. Comagine Health's case managers work closely with patients, families, providers and payers to develop, implement and monitor personalized, holistic care plans.

Our services help patients and families navigate the health care system and offer solutions to barriers and challenges they encounter. Patients have improved health outcomes and an increased understanding of their unique health conditions.
